About Us

As a Trudos company many of our Russian and Caspian clients and their activities are already well known to us, allowing us a unique insight into their expectations and objectives. It is therefore not surprising that when environmental advice is needed, they turn to us to provide it.

Russia, the Caspian and Central Eurasia are dynamic regions of the world and with close links to governments, their agencies and major industries within the area, we are ideally placed to influence and to understand each of their environmental priorities and policy decisions

Trudos Environmental brings together an exceptional group of people from around the world, and with them, extensive international and regional experience. Specialist teams that can advise on every aspect of environmental issues, whether that be general guidance about proposed changes in policy or the physical work required to ensure compliance - advice on waste management or project evaluation and much more.

Services

Trudos Environmental and its partners offer a fully integrated service bringing the provision of all environmental services under one roof.

With the ability to devote both the time and resources necessary to assist our clients with their planned projects, as well as with the unexpected challenges that so often come with complex environmental issues, short or long term, as and when required.

Our dedicated specialists and engineers, provide a level of service that is as individual as our clients and able to give each the attention necessary to support them fully in their endeavours in Russia, Central Eurasia and the Caspian., on and off-shore, above and below ground.

And Account Managers that truly understand the subject on which they advise, and have the experience to offer practical alternatives to keep the project on tack when things do not always go as planned.

Services

As with all Trudos divisions, the partners we choose to provide the specific services to our clients are all world leaders in their field, bringing with them solution led services, that offer both flexibility and bespoke applications.

Waste Management specialists able to deliver solutions that fit the specific criteria of our clients waste streams - Soil and Water engineers that offer a full range of monitoring and soil and water remediation technologies - a Consultancy that can advise on every aspect of environmental issues to governments and industry alike, and evaluate their effects.

Equally important to offering cutting edge solutions, is the ability of our people to help our clients understand the questions needed to be asked of government and regulators about their future plans, and so be able to design internal policies and systems, robust enough to withstand the changes that are likely to come, as well as those that are unforeseen.

Waste Management

As governments around the world announce lower CO₂ emission levels and seek higher levels of recycling, it has never been more important to understand how to maximise the performance of waste streams. We help our clients understand how recycling and collection systems perform, and how they would continue to against future changes.

Household Waste – providing pre and post collection solutions that send as little as possible to land fill, utilising the latest technologies and methodology to separate recyclable elements from compostable biomass and from residual waste.

Agricultural Waste – advice on how to maximise income streams from the crop and animal waste now targeted by energy and chemical companies as prime feedstock.

Hazardous Waste – keeping clients fully updated on current and proposed HSE laws and regulations to ensure their compliance, no matter how hazardous the material they need to dispose of.

Soil & Water

Trudos Environmental is more than just a consultancy, it has the ability to put its advice into action. In particular, where new technologies provide a remedy to the consequences of past practices to both work and the wider environment.

Hydrological – advice and assistance in the restoration and development of water resources. We are also able to provide Total Loss Contingencies as well as water supply security risk assessments.

Remediation – planned and emergency soil remediation and stabilisation, for those industries where long-term leakage and spills makes the surrounding environment especially susceptible to damage, affecting the land and human health.

Monitoring – the monitoring of vulnerable soil and water locations has proved critical to understanding the change of levels and the migration of contamination. We offer bespoke and cost effective solutions, providing high quality data to support decisions for or against more intrusive applications.

Consultancy

With access to an exceptional group of specialists, we offer the latest advice on technologies and methodologies across the full spectrum of Environment issues. This is only possible because of an in-depth understanding of the issues that confront our clients and the policies that drive them.

Waste – advice on and project management for the most complex of waste collection and recycling challenges, providing governments and their agencies, as well as commercial enterprises with the most appropriate solutions to their specific needs.

Evaluation – working closely with our clients and other stakeholders to evaluate the impact of their current or proposed environmental policies, and how they perform against expectations.

Energy – through advice and the world leading technologies of our partners, we help our clients, governments and their agencies, comply with, and exceed their legislative and corporate obligations.
